New heteromultimeric proton-gated ion channel for diagnosing, diseases associated with expression of the channel e.g. neurodegenerative diseases, comprises two different types of a ion channel subunits treating

Claim 7; Page 100-101; 105pp; English

cc or their variants having 80% sequence identity, the channel being cactivated by protons, acids, low pH solutions, the nucleic acids ce encoding the subunits, a recombinant bicistronic vector comprising a cc encoding the subunits, a recombinant bicistronic vector comprising a cc encoding at least two individual subunits or variants of cancel caid encoding at least two individual subunits or variants of the subunits or a domain which is capable of disrupting assembly composed the ion channel and ant/Agonists of the ion channel. The polypeptides and polypucleotides are useful for diagnosing a disease or a susceptibility to a disease in a subject related to expression or cactivity of the heteromultimeric channel (e.g. by gene therapy using the vector). Such diseases include chronic pain, neuropathic pain such as concer- and AIDS (acquired immunodeficiency syndrome)-related, neurodegenerative disease, Such as Alzheimer's disease, Parkinson's disease, Huntington's disease, Creutzfeld-Jacob disease, and amyotrophic clateral sclerosis and dementias, including AIDS-related as well as convulsions, epilepsy, stroke, anxiety and depression. They are also useful for treating cardiovascular diseases such as angina, congestive The invention relates to a protein complex forming a heteromultimeric amiloride and gadolinium-sensitive proton-gated cation channel (ASIC-2S.2), where the individual components of the heteromultimeric channel include the acid sensing ion channel (ASIC)2A and ASIC3 proteins the component of the heteromultimeric channel include the acid sensing ion channel (ASIC)2A and ASIC3 proteins the component of the compone protein

ASIC-2S.2 plays a role in the regulation of neurotransmitter release, neuronal excitability or excitotoxicity and is useful in screening for compounds that regulate neurotransmitter release, synaptic efficacy, neuroexcitability or neurotoxicity. The present sequence encodes rat ASIC3A.

Antisense ASIC DNA or RNA is useful in gene therapy for downgrading expression of ASIC protein, for pH mediated pain disorders e.g. in ischaemia. The vectors are useful for incorporating ASIC DNA or RNA for use in gene therapy. Proton-gated ion channel agonists and antagonists are identified using cells transformed with ASIC DNA by allowing interaction between the candidate substance and ASIC protein in the membrane, and measuring interaction and/or cell response. Partial agonists and antagonists can be identified by their ability to block the response of the cell to present in a solution of a given acid pH or any agonist. The hybridisation probes are useful for screening libraries for ASIC DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

                                                                                                                                                                                                                                                                     modulators of these channels, particularly to identify compounds that modulate perception of acidity, as regards nociception (pain) rather than taste. These compounds are used to treat or prevent pain associated with acidity (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in tissues, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel protein, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Aliheimer's, Parkinson's or Huntington's diseases, amyotrophic lateral sclerosis or cerebellar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rat; neuronal cationic channel; amiloride; proton; ASIC; brain; acid sensing ionic channel; hybridisation; primer; PCR; amplific modulator, acidity; nociception; pain; taste; inflammation; isch tumour; cerebral neurodegeneration; transgenic animal; knockout gene therapy; Alzheimer's; Parkinson's; Huntington's; disease; protrochial ischemics; parkinson's; Huntington's; disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the gene encoding a rat neuronal cationic channel that is sensitive to amiloride and activated by protons and is designated Acid Sensing Ionic Channel (ASIC). This sequence represents the rat ASICIB gene. The protein can be used to screen
                                                                                                                                                                                                                           Sequence

The present sequence encodes a rat neuronal acid-sensitive cation channel 1B (ASIC1B) protein. The protein is a proton-gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neuronal acid-sensitive cation channel; ASIC; ASIC proton-gated cation channel; biphasic desensitisati cation transport channel; acid sensor; pH detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1379

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  channels are sensitive to amiloride. The specification describes proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methodidentify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor and might play an important role in the detection of lasting pH can be actively of the sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of lasting pH can be actively as a sensor and might play an important role in the detection of last
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (pain) rather than taste. These compounds are used to treat or prevent pain associated with acidity (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in tissues, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel protein, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Alzhelmer's, Parkinson's or Huntington's diseases, amyotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a partial gene encoding a human neuronal cationic channel that is sensitive to amiloride and activated by protons and is designated Acid Sensing Ionic Channel (ASIC). The protein can be used to screen for modulators of these channels, particularly to identify compounds that modulate perception of acidity, as regards notiception

                                                                                                                                                                    The present sequence encodes a human partial neuronal acid-sensitive cation channel 1A (ASICIA) protein. The protein is a proton-gated cation channel subunit that has biphasic desensitisation kinetics with both a rapidly inactivating sodium-selective and a sustained component. The channels are sensitive to amiloride. The specification describes ASIC3 proteins, which are expressed in the sensory neurons but not in the brain. The cation transport channel proteins can be used in methods to identify substances capable of modulating the activity of cation transport channels. The human ASIC3 protein is also an acid sensor, and might play an important role in the detection of lasting pH changes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1470

This sequence represents the gene encoding a rat neuronal cationic channel that is sensitive to amiloride and activated by protons and is designated Acid Sensing Ionic Channel (ASIC). This sequence represents the rat ASIC1A gene. The sequence was isolated from a rat brain DNA library using a probe amplified by primers AAV60845-V60846. The protein can be used to screen for modulators of these channels, can be regards nociception (pain) rather than taste. These compounds are used to treat or prevent pain associated with acidity (e.g. in cases of inflammation, ischaemia or some tumours) and as inhibitors of neurodegeneration caused by overexpression of the channels. Antibodies to the protein are used to detect the channels in tissues, and to act therapeutically as channel modulators. The nucleic acid can be used to generate transgenic, particularly knockout, animals for studying carriers. generate transgenic, particularly knockout, animals for studying ASIC-related disorders, also for gene therapy. The channel protein, or its (ant)agonists, can be used to treat or prevent cerebral neurodegenerative conditions (e.g. Alzheimer's, Parkinson's or Huntington's diseases, amyotrophic lateral sclerosis or cerebellar

Sequence 3562 BP; 905 A; 827 C; 862 G; 968 T; 0 other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
